## **Point of Sale (PoS)**

Computerized cash register to sum up your total sales, calculates the balance which has to be returned to the customer and automatically adjusts the Inventory levels to evaluate the quantity sold for your inventory maintenance. UdyogERP comes with a ton of features for Retail, Trading and many other industries.

## **POS Features**

While it's clear that having a POS is beneficial to your business, it's important to understand the key features that a POS system should have and the specific benefits they bring:

- Generates POS Invoices with Date and time of transaction
- Ensures management of gift coupons, vouchers and discount tickets and so on
- Eases Cash and Credit / Debit Card transactions and allows multiple mode of payment for a single invoice
- Tracks balances to be returned to buyers from the money tendered
- Facilitates bar code scanning of SKUs (or items)
- Provides quantified tracking of sales promotions
- Allows access to inventory levels and provides the option of quickly matching inventory with floor counts
- Helps in identifying consumer purchasing patterns
- Generates standard and customized reports such as Cash Registers, POS Registers, and Inventory Reports
- Increases efficiency, revenue and productivity at the point of sale

## **Barcoding:**

Udyog Barcode feature combines the manual efforts and smoothen the process flow by a simple scan. Typically users deployed our barcode option at retail stores, identification cards, to identify a particular product number, person, or location. The code uses a sequence of vertical bars and spaces to represent numbers and other symbols.

You can either print the barcode on a barcode sticker sheet or plain paper as per your requirement. You are just a single click away to generate a barcode for products. This customization is very useful at retail outlets where they have to just scan the barcode of the product on invoice and need not to enter the name of the product. Also, as like name wise, barcode could generate as per lot wise for the products.

## **Key Features of Barcode:**

Barcode stickers and labels are widely used in millions of organizations globally to improve the data management & accessibility, to reduce cost & increase productivity. Hence, this innovative & easy to implement tool that allows companies in virtually & industry to benefit using labels & barcode stickers.

- **Accuracy-** It visibly improves the data accuracy as it eliminates errors which are caused by human involvement.
- **Efficiency-** It increases the efficiency of business by converting manual training tasks into electronic, real-time process using barcode labels. It makes our work fast & free up employee's time.
- **Consistency-** It ensures consistency & gives predictable operations for exchanged product quality by combining data management functions.

### **Advantages of using Barcode:**

- Barcodes eliminates the possibility of human error.
- Using a barcode system reduces employee training time as It takes only minutes to master the hand-held scanner for reading barcodes.
- Barcodes are inexpensive to design and print.
- Barcodes are extremely versatile as they can be used for any kind of necessary data collection
- Inventory control improves. Because barcodes make it possible to track inventory so precisely, inventory levels can reduce.
- Barcodes provide better data. Since one barcode can use for inventory and pricing information
- Data obtained through barcodes is available rapidly. Since the information is scanned directly into the central computer, it can be readily accessed.
